SUMMARY

Computer Science undergraduate with hands-on experience in building AI-driven and full-stack systems, including NLP-based applications, semantic search, and automated workflows. Strong in problem-solving and structuring solutions for real-world use cases, with experience developing end-to-end applications using technologies like Next.js and Node.js. Seeking opportunities to further develop skills in software engineering and AI systems.

EXPERIENCE

Computer Departmental Internship

Fr. Conceicao Rodrigues Institute of Technology

December 2025 - March 2026

- Contributed to an NLP-based project titled *Automated Patentability Assessment Tool*, focusing on the inventive step detection module for analyzing patent claims.
- Used spaCy and SentenceTransformers to process patent text and extract key components and relationships from complex legal descriptions.
- Implemented semantic similarity checks and simple rule-based logic to compare patent claims with prior art and help assess their novelty.
- Collaborated in a 2-member team, working closely with a mentor, sharing weekly progress updates, and making iterative improvements to the module.

Frontend Developer Intern (Remote)

Victo & Co.

January 2026 - April 2026

- Redesigned the company's existing HTML website into a modern, responsive platform using Next.js and Tailwind CSS, improving the overall user experience and helping present services more clearly.
- Built a lead generation feature with structured forms to capture potential client inquiries in an organized and efficient way.
- Developed an admin dashboard to track and manage leads, along with a simple analytics dashboard to better understand user activity and trends.
- Collaborated with the team, incorporating regular feedback and making iterative improvements to better align the product with business needs.

PROJECT

PLACEMATE : A Multi-Agent, RAG-Based System for Job-Specific Resume Optimization

github.com/KalpeshEragi/PlaceMates • July 2025 - April 2026

- Built a system that analyzes user profiles to identify relevant job opportunities using semantic similarity, going beyond keyword-based matching.
- Developed a retrieval-augmented (RAG) pipeline to generate job-specific resumes, adapting the same profile for different roles.
- Designed a multi-agent iterative refinement process to improve resume quality through feedback-driven updates.
- Used n8n to automate job collection and generate daily job-specific resumes for users through scheduled workflows, creating a fully automated end-to-end system.

METAPDF— AI-Powered Document Assistant for PDF Summarization and Conversational Q&A

github.com/KalpeshEragi/MetaPDF • August 2024 - April 2025

- Integrated Google Gemini AI and BART-large-CNN models for smart summarization and context-aware PDF chat.
- Implemented FAISS-based vector search for fast, semantic content retrieval.
- Built with Flask, Streamlit, and LangChain, featuring a responsive and interactive UI for seamless user experience.
- Empowers users to transform static documents into interactive, AI-driven knowledge sources.

EDUCATION

BTECH IN COMPUTER SCIENCE AND HONORS IN AIML

Fr. Conceicao Rodrigues Institute of Technology • 9.41

Higher Secondary Certificate

St John the Baptist High School & Jr College • 79.67 %

Secondary School Certificate

Shreeram Vidyalaya & Junior College • 85.80%

AWARDS & HONORS

WebRush 2.0 – The Web Replication Race (1st Position)

Artificial Intelligence and Deep Learning Club, FCRIT • 2025

- Achieved top performance in a one-hour competition to replicate a web template using v0.dev. Showcased skills in prompt engineering and rapid prototyping under strict time constraints.

SKILLS

Languages & Core Concepts: Python, Java, C (foundational); Data Structures & Algorithms (Java), OOP, Operating Systems, Computer Networks

Web Development: React.js, Next.js, Tailwind CSS, Node.js, Express.js, REST APIs

Databases: MySQL, MongoDB

AI & NLP: text processing, semantic search (embeddings), FAISS, LLM integration (Google Gemini), transformers (Hugging Face), Prompt engineering (Claude, Chatgpt) for workflow optimization

Tools & Platforms: Version control with Git/GitHub
